PROFESSIONAL SUMMARY

Aspiring Software Engineer and AI/ML student with hands-on experience building intelligent, user-focused web and mobile applications. Skilled in full-stack development (PHP, JavaScript, React) and AI/ML (Python, TensorFlow, Scikit-learn), with a track record of shipping production-grade projects — from WordPress-based university systems to native Android apps and AI-driven tools. Seeking an internship to apply strong technical fundamentals, collaborate with experienced engineers, and contribute to impactful software products.

Mind Power University

Web Developer Intern

Feb 2026 – Present

- Assisting senior developers in the maintenance, enhancement, and optimization of the official university website and digital platforms.
- Managing website updates, content modifications, bug fixes, and performance improvements to ensure a seamless user experience.
- Developed and deployed the official Mind Power University Android application using WebView technology, improving accessibility of university services for students and staff.
- Contributing to SEO optimization, digital marketing initiatives, and website analytics to enhance online visibility and user engagement.
- Creating AI-powered promotional content, including videos and digital media assets, to support university branding and marketing campaigns.
- Collaborating with technical and administrative teams to improve portal functionality, productivity, and overall digital infrastructure.

“

PROJECTS

Edu Portal 📄 | PHP, MySQL, JavaScript, HTML, CSS, Bootstrap

- Developed a web-based educational portal for managing academic information, student records, and learning resources.
- Implemented responsive user interfaces and optimized database operations for efficient data management.
- Integrated secure login functionality and role-based access for administrators and users.
- Enhanced usability and performance through streamlined workflows and improved navigation.

Automated OMR Evaluator 📄 | Python, OpenCV, Image Processing

- Developed an automated Optical Mark Recognition (OMR) evaluation system to process answer sheets digitally.
- Implemented image processing techniques for bubble detection, answer validation, and score calculation.
- Reduced manual evaluation effort and improved result accuracy through automated assessment.
- Generated instant evaluation reports with calculated scores and performance summaries.

Mind Power University Mobile App | Android Studio, Java, WebView

- Developed and deployed the official Mind Power University Android application using WebView technology.
- Provided students and faculty with seamless access to university services, notices, academic portals, and university resources.
- Optimized application performance, navigation flow, and user experience across Android devices.
- Enhanced accessibility and engagement with university digital services through a mobile-first platform.
